ABSTRACT

This report provides a profile of child care in the seven county metropolitan area in Minnesota. Child Care WORKS is a statewide coalition of over 150 organizations that develops and promotes a state child care agenda. This report provides statistical data on child care from 1980 to 1990, and projections through the year 2000. A brief outline of the report's highlights is followed by discussion of six issues: (1) population and its effect on the demand for child care; (2) the licensed capacity of child care programs in 1990; (3) the average weekly cost of child care in 1990; (4) average staff wages and turnover; (5) child care financial assistance, 1989-1990; and (6) the quality of child care in 1990. For each of these issues, a chart presenting data, a commentary, and the source of data are provided. Appended is data for each of the seven counties concerning population and the demand for child care from 1980 to 2000; the supply of child care in 1990; and financial assistance for fiscal year 1990. About Child Care WORKS

Formed in 1983, Child Care WORKS is a statewide coalition of over 150 endorsing organizations that develops and promotes a state child care agenda. In 1989 Child Care WORKS received a three year grant from the McKnight Foundation to work with local citizens, agencies and businesses in the seven county metropolitan are to bring about more public awareness of child care issues. Coordinators on the project are: Anoka - Sandy Hannah, Anoka County Community Action Program, 784-2443; Dakota - Jane Berge, Community Action Council, 431-2112; Hennepin - Grace Norris, Greater Minneapolis Day Care Association, 341-1177; Ramsey - Tom Copeland, Resources for Child Caring, 641-0305; Scott and Carver - Suzy Tewalt, 466-2689; and Washington - Karen Gilbertson, Ramsey Action Programs for Washington County, 738-3943.

This report was developed and written by Tom Copeland, Resources for Child Caring. Copies of this report are available through Child Care WORKS, 1628 Elliot Avenue South, Suite 306, Minneapolis, MN 55404, (612) 341-1177.

Funding for this report provided by the McKnight Foundation Child Care Initiative.

A Child Care WORKS Profile of Child Care in the Seven County Metropolitan Area

Profile Highlights:

- The 1980's witnessed an enormous growth rate of 227% in the number of licensed child care spaces in the seven county metropolitan area. But because of declining birth rates, the demand for out-of-home child care is likely to level off during the 1990's. As competition for enrollment increases, particularly for children aged 2-5, this will mean a consolidation of some child care programs. In the next ten years we will likely see child care programs adapting more to meet particular parent needs such as longer hours, drop in care, sick child care, special needs care, etc.
- Almost 95,000 children (0-12 years) are currently enrolled in the 6,932 licensed child care programs. This represents over one-fifth of all children below age 13. Family child care providers care for a majority of children in licensed programs for all ages except for those 2 1/2 years kindergarten.
- The average cost of care for an infant is \$121 a week in a child care center and ranges from \$73 to \$89 a week in a family child care home. While these costs are high for many parents, child care workers are not well paid. The average starting salary for a teacher in a full day child care center is \$6.38 an hour, or \$13,270 per year.
- Over 4,800 low income working parents received \$17.5 million dollars in financial assistance to help pay for child care costs of over 7,300 children in the year ending June 30, 1990. By the end of 1990, over 3,600 eligible parents were on waiting lists for this program.

Commentary

- The number of children under age twelve in the seven county metropolitan area is expected to decline by 7% between 1990 and 2000. How many child care spaces will be needed for children ages 0-12 by the year 2000? Although the supply of licensed child care spaces experienced a tremendous expansion during the past decade, it will probably grow at a much slower pace in the 1990s. We base our projections on the following assumptions:
 - By 1995, 25% of all children ages 0-12 will be enrolled in licensed child care programs and by 2000 this figure will rise to 27%. In 1990 there were 22% of all children enrolled in these programs. We are assuming that the percent of women working will continue to rise slowly and the number of children cared for by relatives and other nonlicensed programs will slowly decline.
 - 2) In order for parents to have an adequate choice of child care options in the market place, we are assuming that there should be a vacancy rate of at least 15% in licensed child care programs.
 - 3) We arrived at our projections by multiplying the number of children ages 0-12 by 25% in 1995 and 27% in 2000 and then multiplied this by 117.6% to reach a total number of licensed spaces (at a 15% vacancy rate) needed to meet the needs of children ages 0-12. As Chart One indicates, because of declining birth rates, there needs to be only a 21% increase in the number of licensed spaces over the next ten years to meet anticipated demand. This would represent only 10% of the growth rate of the 1980's. Using this analysis, the counties with the greatest need for more child care in the next decade are: Washington (+72%), Anoka (+46%) and Dakota (+46%), while those counties with the least need are Hennepin (+3%) and Ramsey (+8%).

• The demand for new child care is likely to be greatest in areas such as infant care, sick child care, odd hour care, school age care and high quality care. In 1989 over 22,000 families called the child care referral services in the metropolitan area looking for child care. Fifty-six percent of these parents had children under the age of 2 1/2. A recent survey of over 1,000 metropolitan employers identified sick child care as the most significant child care problem facing their employees. As parents begin to have more choices among child care options, it is likely that they will be increasingly sensitive to the quality of the program

Source of Data

- See the appendix for a breakdown of this chart by county.
- The percent of mothers working with children under age six is an estimate based upon Census data. The number of children under six needing care is calculated by multiplying the number of children under age six by the percent of mothers working with children under age six. The number of child care spaces for children under six counts only full time spaces.
- The 1980 numbers are from the 1980 Census and from "Trends in Day Care Services: October, 1980," Minnesota Department of Public Welfare. The 1988 population numbers are from the Center for Health Statistics, Minnesota Department of Health. The rest of the 1988 data is from "The Minnesota Child Care System" (1988) Resources for Child Caring. A slight modification was made in the number of licensed family child care spaces in 1988 based upon a 1990 survey which used an improved methodology.
- The 1990 county population is from the 1990 Census. The estimated number of children 1995-2000 is from "Minnesota Population Projections 1980-2010" Minnesota Department of Energy Planning and Development. The numbers from this report were slightly modified to reflect the more accurate 1988 count done by the Department of Health.

Commentary

• There were 94,683 children (full and part time) enrolled in these licensed programs in 1990: 44% in homes, 35% in full day centers, 19% in half day programs and 2% in Head Start centers. Family child care homes cared for 72% of the infants, 69% of the toddlers, 30% of the preschoolers and 57% of the schoolagers.

- Almost half (49%) of the supply of care in full day centers is concentrated in the hands of the 15 largest operators. The three largest operators (Children's World, New Horizons and Kinder Care) run one third of all the spaces in the metropolitan area. The 15 operators grew at a rate approximately five times faster than other centers between 1988 and 1990.
- The growth in the number of half day programs is likely to remain small because the demand for part-time care is declining among single parents and dual career families.
- With the passage of new federal legislation October 1990, there will be a substantial increase in Head Start funding over the next few years. We can expect the number of three to five year olds served by this program to sharply rise.

Source of Data

- The capacity information for centers, half day programs and Head Start was collected in the summer of 1990 from state licensing records and local child care resource and referral services. The data for homes was collected as of January 1991. The data represents licensed capacity, not desired capacity. Since many homes prefer to accept fewer children than their licensed capacity, the number of spaces actually available to parents is probably 10-15% less.
- Homes and centers (including full and half day programs as well as Head Start) are licensed by the Minnesota Department of Human Services. State licensors monitor centers, while each county hires licensors to monitor family child care homes. Homes are required to be licensed if they care for children from more than one unrelated family. Half day programs are called nursery schools or preschool programs which run one or more 3-4 hour sessions per week. Head Start is a federal program serving low income preschool children, ages 3-5. The numbers for Head Start are the actual enrollment in Head Start centers and in their home-based programs.
- The age definitions for homes and all centers vary somewhat:

| | Homes | Center |
|--|---|--|
| Infant Toddler Preschool School Age | 6 weeks - 11 months 12 months - 29 months 30 months - 1st day of Kindergarten Kindergarten - age 10 | 6 weeks - 15 months 16 months - 32 months 33 months - 1st day of Kindergarten Kindergarten - age 12 |

• The licensed capacity for family child care homes is shown for the youngest age the provider can take a child. In other words, commonly, providers are licensed for 10 children, 6 of whom may be preschool age or younger and 3 of the 6 may be toddler age or younger. We have shown this in the chart as a capacity for 2 infants, 1 toddler, 3 preschoolers and 4 school agers. Because many providers choose to care for only one infant and 2 toddlers, it may be more accurate to combine infant and toddler spaces when looking at capacity.

Commentary

• Family child care rates increased at a pace of approximately 8% per year during the 1980's, while full day center rates increased approximately 6% per year. The greatest difference in the rates between homes and centers is for infant care. While the increase in rates since 1980 ranged between 74% and 117% for preschool and infant care, the Consumer Price Index for Urban Consumers in the Twin Cities rose 63% since 1980.

Source of Data

• The data came from a survey conducted by the metropolitan child care resource and referral agencies on behalf of the Minnesota Department of Human Services. The homes and centers were chosen using a random sampling methodology that is statistically 95% accurate +/- 3%. The survey was conducted July-August 1990 and represents rates charged as of September 1990. The 1980 rate information came from "Trends in Day Care Services: October 1980," Minnesota Department of Public Welfare.

Commentary

- The average yearly starting wage in a full day center for a teacher is \$13,270, for assistant teacher \$11,003, and for an aide \$9,506.
- Accredited centers are those that meet high quality standards as set by the National Association for the Education of Young Children. These standards are higher and more comprehensive that Minnesota licensing standards. State wide, these Accredited centers pay 15% more for a starting teacher salary, 4% more for and assistant teacher and 1% more for an aide.
- There is no accurate data available on the average income of family child care providers. Our best estimate, based on a few limited local surveys is that providers average about \$16,000 gross income and \$10,000 net income. With a 50 hour work week, the average hourly pay is approximately \$4 per hour.

Source of Data

- The source of data is from the same survey described under Chart Three.
- Family child care turnover data is somewhat unreliable because it was obtained from county social service plans which estimated anticipated turnover, not actual turnover. Data from Hennepin, Ramsey and Dakota counties was collected separately and does reflect actual turnover for 1989.

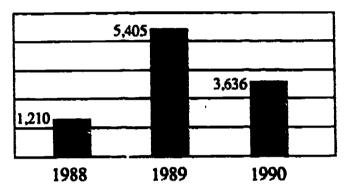

Chart #5 Child Care Financial Assistance (July 1, 1989-June 30, 1990)

| | Basic Sliding Fee | AFDC/STRIDE | Total | % Increase over FY 1989 |

Number of Families on Waiting List

Commentary

- In fiscal year 1990 counties succeeded in spending nearly all state funds allocated for financial assistance for low income working parents. At the end of the year the state reimbursed metropolitan counties for some of their county expenditures with funds that were left unspent by the non-metropolitan counties. This resulted in a drop in county expenditures for the year.
- Because the priority is to fund those families coming off of AFDC, the biggest share of the increase in funds from fiscal year 1989 spent for low income working parents was in the category of AFDC eligible families (+50%), rather than for Basic Sliding Fee eligible families (+9%).

Source of Data

• The data for FY 1989 and 1990 comes from quarterly reports issued by the Department of Human Services. Child Care WORKS conducted a survey of counties to determine the waiting list for 1990. The estimate of the number of eligible children is based upon the number of families with children under age 6 who earned less than the federal poverty level in 1979 for all metropolitan counties. Because the federal poverty level is much lower than the Minnesota Child Care Fund income eligibility guidelines, this number is an extremely conservative one. We multiplied the number of families by the average number of children per family of those now receiving assistance (1.528) to get the estimated

number of eligible children. The Minnesota Child Care Fund is a program administered by the Department of Human Services established to provide child care financial assistance for eligible families, enabling them to seek or retain employment, or participate in education or training. Parents are required to pay a portion of their child care costs while they receive assistance, based on monthly gross income and family size. To be eligible, parents must be earning less than 75% of the state median income for their family size. The Fund is managed by each county.

Commentary

- The best measure available for the quality of child care programs is the National Association for the Education of Young Children. There was almost a doubling of the number of centers accredited between July 1989 and July 1990.
- The Child Care Food Program is a federally sponsored program that offers financial reimbursment to family child care providers who serve food that meet nutritional standards. The national rate of participation on this program is 75%.

Source of Data

• The accreditation data comes from the National Association for the Education of Young Children as of July, 1990. The Child Care Food Program data comes from the Minnesota Department of Education which administers the program.
